## SUMMARY

Computer Science (AI & ML) undergraduate with strong fundamentals in Python, Data Structures & Algorithms, and web technologies. Experience in building deep learning pipelines and interactive AI-powered virtual assistants. Passionate about software development, solving complex problems, and leveraging modern AI to build impactful applications.

## EDUCATION

|                                                                                                                                                           |                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Rao Bahadur Y Mahabaleswarappa Engineering College   VTU</b><br>Bachelor of Engineering in Computer Science & Engineering (AI & ML)   CGPA: 7.4 / 10.0 | <b>2023 – 2027</b> |
| <b>Bellary Independent Pre-University College</b><br>Class 12th (Pre-University)   Percentage: 75%                                                        | <b>2020 – 2022</b> |
| <b>Basavarajeshwari Public School</b><br>Class 10th (SSLC)   Percentage: 82%                                                                              | <b>2020</b>        |

---

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, C, SQL

**Web & Frameworks:** React.js, HTML5, CSS3

**Developer Tools:** Git, GitHub, VS Code

**Core Concepts:** Data Structures & Algorithms (DSA), Database Management Systems (DBMS), OOP

---

## ACADEMIC PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>AIVA (Artificial Interview Virtual Assistant)   Python, React.js, Web APIs</b><br><ul style="list-style-type: none"><li>Developed an AI-powered artificial interview virtual assistant designed to simulate mock interview environments and evaluate user responses.</li><li>Designed an interactive frontend in React.js to deliver dynamic feedback and ensure smooth real-time user interaction.</li><li>Implemented backend evaluation logic in Python to process user input and streamline response assessment.</li></ul> | <b>2026</b> |
| <b>Golden Face Ratio Analysis   Python, MediaPipe, OpenCV</b><br><ul style="list-style-type: none"><li>Developed an AI-powered facial analysis web application using Python, MediaPipe, and OpenCV to evaluate facial proportions and symmetry.</li><li>Implemented facial landmark detection and golden-ratio-based measurements to analyze facial proportions and generate a proportion score.</li><li>Contributed to feature development, testing, and deployment of the interactive web application.</li></ul>                | <b>2025</b> |
